Chapter 296-824 WAC
EMERGENCY RESPONSE

WAC 296-824-100 Scope. This chapter states the minimum requirements that help you protect the safety and health of your employees during a response to a hazardous substance releases in your workplace or any other location.

This chapter applies if your employees are, or could become, involved in responding to uncontrolled releases of hazardous substances in your workplace or any other location. Use the scope flow chart, and definitions that follow, to determine if this chapter applies to your workplace(s). Defined words are italicized in the flow chart.

EXEMPTION: • This chapter does not apply to you if your workplace is a hazardous waste site. If you are not sure about your site classification, see chapter 296-843 WAC, Hazardous waste operations.
• If your workplace is a treatment, storage, and disposal site this chapter may apply.

Note: Requirements in other chapters may also apply to your workplace. You will find some safety and health requirements (for example, personal protective equipment) are addressed on a general level in the WISHA Safety and Health Core Rules, chapter 296-800 WAC, while being addressed for a specific application in this rule. When this happens, both requirements apply and should not conflict. If you are uncertain which requirements to follow, you must comply with the more protective requirement. Contact your local L&I office if you need assistance in making this determination.

(2/17/09) [Ch. 296-824 WAC—p. 1]
Definitions applicable to the flow chart. (See WAC 296-824-800 for additional definitions used in the chapter):

**Danger area**
Areas where conditions pose a serious danger to employees, such as areas where:
- Immediately dangerous to life or health (IDLH) conditions could exist
- High levels of exposure to toxic substances could exist
- There is a potential for exceeding the lower explosive limit (LEL), also known as the lower flammability limit (LFL), of a substance.

**Emergency response**
A response to an anticipated release of a hazardous substance that is, or could become, an *uncontrolled release*.

**Hazardous substance**
Any biological, radiological, or chemical substance that can have adverse effects on humans. (See WAC 296-824-800 for a more specific definition.)

**Immediately dangerous to life or health (IDLH)**
Any atmospheric condition that would:
- Cause an immediate threat to life
- Cause permanent or delayed adverse health effects
- Interfere with an employee’s ability to escape

**Incidental release**
A release that can be safely controlled at the time of the release and does not have the potential to become an *uncontrolled release*.

Example of a situation that results in an incidental release:
A tanker truck is receiving a load of hazardous liquid when a leak occurs. The driver knows the only hazard from the liquid is minor skin irritation. The employer has trained the driver on procedures and provided equipment to use for a release of this quantity. The driver puts on skin protection and stops the leak. A spill kit is used to contain, absorb, and pick up the spilled material for disposal.

**Limited action**
Action necessary to:
- Secure an operation during emergency responses,
- Prevent an incident from increasing in severity.
Examples include shutting down processes and closing emergency valves.

**Release**

A spill, leak, or other type of hazardous substance discharge.

**Uncontrolled release**

A release where significant safety and health risks could be created. Releases of hazardous substances that are either incidental or could not create a safety or health hazard (i.e., fire, explosion or chemical exposure) are not considered to be uncontrolled releases.

Examples of conditions that could create a significant safety and health risk:

- Large-quantity releases
- Small-releases that could be highly toxic
- Potentially contaminated individuals arriving at hospitals
- Airborne exposures that could exceed a WISHA permissible exposure limit or a published exposure limit and employees are not adequately trained or equipped to control the release.

Example of an uncontrolled release:

A forklift driver knocks over a container of a solvent-based liquid, releasing the contents onto the warehouse floor. The driver has been trained to recognize the vapor is flammable and moderately toxic when inhaled. The driver has not been trained or equipped to control the release. The driver needs to notify someone of the release so an emergency response can be initiated.

**Workplace**

- A fixed facility
- A temporary location (such as a traffic corridor)
- Locations where employees respond to emergencies.

Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, 02-11-141, § 296-824-11020, filed 5/22/02, effective 10/1/02.

**WAC 296-824-110 Reserved.**

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-110, filed 9/24/02, effective 10/1/02. Statutory Authority: RCW 49.17.010, [49.17].040, and [49.17].050. 02-11-141, § 296-824-110, filed 5/22/02, effective 10/1/02.]
WAC 296-824-13030 Reserved.

WAC 296-824-13030 Reserved.

WAC 296-824-14010 Reserved.

WAC 296-824-14010 Reserved.

WAC 296-824-15010 Reserved.

WAC 296-824-15010 Reserved.

WAC 296-824-20005 Develop an emergency response plan.

You must:

(1) Make sure your plan is written and adequately addresses, as a minimum, all of the following:

• Preemergency planning and coordination with additional responders (including personnel from other employers such as: Fire departments, law enforcement agencies, emergency medical services, and state or federal agencies).

• Personnel roles, (See Table 1) and lines of authority and communications for all affected parties including responders

• Employee training (see WAC 296-824-30005 for more detail):

Note: • You may already have an emergency response plan, such as required by chapter 296-843 WAC, Hazardous waste operations or by state and locally coordinated response efforts (Section 303 of Superfund Amendments and Reauthorization Act (SARA), Title III). You may use those plans to comply with this section, if they include the items listed below.

• Before a written emergency response plan can be developed, you will need to anticipate the types of uncontrolled releases that employees could encounter in your workplace(s).

• Responders’ level of training depends on the duties or roles the employer assigns.

• Training for the employees’ role should address the competencies specified in Tables 3 through 6.

• Training on specific substances may be appropriate depending on the number and characteristics of hazardous substances expected to be encountered. For example, if employees may only respond to one substance, you could provide training (covering the knowledge and skills specified in Tables 3 through 6) on that single substance. If employees might respond to a range of hazardous substances, training may be required to cover categories of hazardous substances.

• Videos and automated training methods (for example: Interactive computer-based programs) may be used in training; however, instructors must be readily available to:
  – Encourage and provide responses to questions for the benefit of the group.
  – Evaluate employee understanding of the material.

Note: • If a manufacturer’s printed information or WISHA rule adequately addresses procedural requirements (such as donning or doffing for PPE), it is not necessary to rewrite this into your program; simply attach the printed information.

• You may use written procedures provided by the equipment manufacturer when they meet the requirements of other chapters, including chapter 296-842 WAC, Respirators.

• Emergency equipment

• Emergency response procedures

• Decontamination procedures determined by a hazardous materials specialist or other qualified individual

• Methods to critically assess the response and conduct appropriate follow-up

Limited Action and Employee Roles

<table>
<thead>
<tr>
<th>If . . .</th>
<th>Then employees involved would be:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Limited action could be conducted in the danger area</td>
<td>Considered emergency responders</td>
</tr>
<tr>
<td>Limited action will not be conducted in the danger area</td>
<td>Considered evacuees, not emergency responders</td>
</tr>
</tbody>
</table>

– Details of who will evacuate immediately and who will remain behind for limited action
– Evacuation routes and procedures
– How to establish safe distances and places of refuge (for example, during emergency response the incident commander (IC) decides to make changes based on new developments, i.e., changes in the wind direction).

• Methods of securing and controlling access to the site

• Emergency medical treatment and first aid

• A complete personal protective equipment (PPE) program that addresses:
  – Selection of PPE including selection criteria to be used and the identification, specified use and limitations of the PPE selected.
  – Training on proper use of PPE (including maintenance).
  – Hazards created by wearing PPE including heat stress during temperature extremes, and/or other appropriate medical considerations.
  – Criteria used for determining the proper fit of PPE.
  – Procedures covering proper use of PPE including procedures for inspection, putting it on (donning) and removing it (doffing).
  – Maintenance of PPE including procedures for decontamination, disposal and storage.
  – Methods used to evaluate the effectiveness of your PPE program.

Note: • Provide other instructional interaction to the group.
You must:
(2) Make your written emergency response plan available to employees, their representatives, and WISHA personnel for inspecting or copying.

Table 1

Roles and Duties of Emergency Responders

<table>
<thead>
<tr>
<th>If the employee's role is:</th>
<th>Then all of the following apply. They:</th>
</tr>
</thead>
</table>
| First responder at the awareness level | • Are likely to witness or discover a hazardous substance release  
• Are trained to initiate an emergency response by notifying the proper authorities of the release  
• Take no further action beyond notifying the authorities |
| First responder at the operations level | • Respond to actual or potential releases in order to protect nearby persons, property, and/or the environment from the effects of the release  
• Are trained to respond defensively, without trying to stop the release  
• May try to:  
  - Confine the release from a safe distance  
  - Keep it from spreading  
  - Protect others from hazardous exposures |
| Hazardous materials technician | • Respond to releases or potential releases, with the intent of stopping the release  
• Are trained to approach the point of release offensively in order to, either:  
  - Plug  
  - Patch  
  - Stop the release using other methods |
| Hazardous materials specialist | • Respond along with, and provide support to, hazardous materials technicians  
• Are required to have more specific knowledge of hazardous substances than a hazardous materials technician  
• Act as the site activity liaison when federal, state, local, and other government authorities participate |
| Incident commander | • Have ultimate responsibility for:  
  - Direction  
  - Control  
  - Coordination of the response effort  
  - Will assume control of the incident beyond the first responder awareness level |
| Specialist employee | • Are a technical, medical, environmental, or other type of expert  
• May represent a hazardous substance manufacturer, shipper, or a government agency  
• May be present at the scene or may assist from an offsite location  
• Regularly work with specific hazardous substances  
• Are trained in the hazards of specific substances  
• Are expected to give technical advice or assistance to the incident commander or incident safety officer, when requested |
| Skilled support personnel | • Are needed to perform an immediate, specific emergency support task at the site  
• Are skilled in the operation of equipment including:  
  - Earth moving equipment  
  - Cranes  
  - Hoisting equipment |
| Incident safety officer | • Are designated by the incident commander  
• Are knowledgeable in operations being implemented at the site  
• Have specific responsibility to:  
  - Identify and evaluate hazards  
  - Provide direction on employee safety matters |

Note:
- In situations where multiple employers could respond to an incident, all plans should consistently address:  
  - Who will be designated as the incident commander (IC)  
  - If, when, and how transfer of the incident commander (IC) position will take place.

WAC 296-824-3000 Training.

Your responsibility:
To make sure employees participating in emergency response operations are appropriately trained for their assigned roles and duties.

WAC 296-824-30005 Train your employees.

Note:
- Use Tables 3 through 6 to identify your employees' training competencies.
• You may conduct training internally, or use outside training services to comply with this section.
  – When outside trainers are hired, you are still responsible for making sure the requirements of this section are met. For example, employers may compare the course outline to the competencies listed in Tables 3 through 6.

You must:
• Make sure employees are appropriately trained for their assigned roles and duties as follows:

EXEMPTION: Skilled support employees are not covered by the training requirements in this section. (See WAC 296-824-50015.)

– Initial training:
• Provide initial training before the employee is allowed to participate in an actual emergency response operation.

Note: When first responders at the awareness or operations level have sufficient experience to objectively demonstrate competencies specified in Table 3, you may accept experience instead of training.

• Make sure initial training adequately addresses the competencies in Tables 3 through 6 and the minimum training durations in Table 2.

• Certify that employees objectively demonstrate competencies specified in Tables 3, 4 and 5 (except for employees trained as first responders at the awareness level).

– Retraining (refresher) training:
• Provide retraining annually
• Make sure retraining covers necessary content
• Document training or demonstrated competency

Note: Retraining is not required when employees demonstrate competencies annually and a record is kept of the demonstration methodology used.

– Trainer qualifications:
• Verify trainers have satisfactorily completed an instructors’ training course for the subjects they teach. For example, courses offered by the United States National Academy, or equivalent courses are acceptable.
  OR
• Have the educational and instructional experience necessary for training.

– Specialist employees:
• Specialist employees who have been sent to the scene to advise or assist must receive training or demonstrate competency in their specialty, annually.

</tr>
</tbody>
</table>

### Table 5
**Competencies for Incident Commanders**

<table>
<thead>
<tr>
<th>Employees designated as Incident Commanders must be able to show they:</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Have competencies specified for the First Responder Operations Level. (See Table 3.)</td>
</tr>
<tr>
<td>[ ] Know of the state emergency response plan and the Federal Regional Response Team.</td>
</tr>
<tr>
<td>[ ] Can implement the local emergency response plan.</td>
</tr>
<tr>
<td>[ ] Can implement the employer's emergency response plan.</td>
</tr>
<tr>
<td>[ ] Have knowledge of the incident command system (ICS) and understand how they relate to it.</td>
</tr>
<tr>
<td>[ ] Can implement the employer's ICS.</td>
</tr>
<tr>
<td>[ ] Understand the hazards and risks associated with employees working in chemical protective clothing.</td>
</tr>
<tr>
<td>[ ] Understand the importance of decontamination procedures.</td>
</tr>
</tbody>
</table>

**Note:** If the first employee arriving at the scene is not trained as an IC, they may take control of the incident within their designated role and training level.

### Table 6
**Competencies for Specialist Employees**

<table>
<thead>
<tr>
<th>Employees designated as Specialist Employees must be able to show they:</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ] Have current knowledge in their field regarding safety and health practices relating to the specific hazardous substances.</td>
</tr>
<tr>
<td>[ ] Have the knowledge of the ICS and understand how they relate to it.</td>
</tr>
<tr>
<td>[ ] Understand the care and use of personal protective equipment (PPE).</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060, 02-20-034, § 296-824-30005, filed 9/24/02, effective 10/1/02.]
WAC 296-824-400 Medical surveillance. Summary.

Your responsibility:
To provide and document medical surveillance for your employees.

You must:
Provide medical surveillance to employees
WAC 296-824-40005
Keep records
WAC 296-824-40010.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-400, filed 9/24/02, effective 10/1/02.]

WAC 296-824-40005 Provide medical surveillance to employees.

You must:
(1) Provide medical surveillance for employees to comply with Tables 7 and 8, and the following:
• Make medical surveillance available at:
  – Reasonable times and places.
  – No cost to employees, including travel associated costs such as mileage, gas or bus fare if the employee is required to travel off site
  AND
  – Wages for additional time spent outside of employees normal work hours.
• Make sure a licensed physician performs or supervises exams and procedures.
• Give complete information to the examining physician including:
  – A copy of this chapter.
  – A description of the employee's duties that relate to hazardous substance exposure.
  – The hazardous substance exposure levels anticipated for the employee.
  – A description of the personal protective equipment (PPE) the employee could use.

(2) Obtain the physician's written opinion and give a copy to the employee that includes:
• A statement of whether or not medical conditions were found which would increase the employee's risk for impairment during emergency response work or respirator use.
  – Do not include specific findings or diagnoses unrelated to occupational exposures.
• Limitations recommended to the employee's assigned work, if any.
• Exam and test results if the employee requests this information.
• A statement that affirms the employee has been confidentially informed of medical exam results (including medical conditions requiring follow-up).

Table 7 Medical Surveillance For Employee Categories

<table>
<thead>
<tr>
<th>If the employee is covered by this chapter and is:</th>
<th>Then you must:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Exposed for at least 30 days a year to health hazards or hazardous substances at or above the permissible exposure limit or published exposure levels (even when respirators are used), OR • Required to wear a respirator for at least 30 days a year.*</td>
<td>• Offer standard medical surveillance as specified in Table 8.*</td>
</tr>
<tr>
<td>• A hazardous materials (HAZMAT) team member • A hazardous materials specialist</td>
<td>• Provide standard medical surveillance as specified in Table 8.</td>
</tr>
<tr>
<td>• An emergency responder who shows immediate or delayed signs or symptoms possibly resulting from exposure to hazardous substances during an incident.</td>
<td>• Provide incident-specific medical surveillance as specified in Table 8.</td>
</tr>
<tr>
<td>• Not an emergency responder and: • May be injured • Shows immediate or delayed signs or symptoms possibly resulting from exposure to hazardous substances • May have been exposed to hazardous substances at concentrations above the permissible exposure limits (PELs) or the published exposure levels without appropriate PPE.</td>
<td>• Offer incident-specific medical surveillance as specified in Table 8.</td>
</tr>
</tbody>
</table>

*Note: A medical evaluation for respirator use is required by chapter 296-842 WAC, Respirators, for those employees who have not been cleared for respirator use during medical surveillance activities.
Table 8
Frequency of Exams and Consultations

<table>
<thead>
<tr>
<th>If the employee is covered by:</th>
<th>Then medical surveillance must include:</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Standard medical surveillance</td>
<td>• Exams and consultations:</td>
</tr>
<tr>
<td></td>
<td>– Before assignment.</td>
</tr>
<tr>
<td></td>
<td>Note: If the employee is a hazardous materials (HAZMAT) team member or a hazardous materials specialist, the employee must receive a baseline physical examination.</td>
</tr>
<tr>
<td></td>
<td>– At least once every 12 months after their initial assignment unless the physician believes a shorter, or longer interval (but no more than 24 months) is appropriate.</td>
</tr>
<tr>
<td></td>
<td>– Whenever employees are reassigned to an area where they will no longer be covered by medical surveillance and they have not been examined within the past 6 months.</td>
</tr>
<tr>
<td></td>
<td>– As soon as possible after an employee reports:</td>
</tr>
<tr>
<td></td>
<td>◆ Signs or symptoms of possible overexposure to hazardous substances or health hazards</td>
</tr>
<tr>
<td></td>
<td>◆ Injury</td>
</tr>
<tr>
<td></td>
<td>◆ Exposure above the permissible exposure limits or published exposure levels</td>
</tr>
<tr>
<td></td>
<td>– At the termination of their employment unless they were examined within the past 6 months.</td>
</tr>
<tr>
<td>• Incident-specific medical surveillance</td>
<td>• Medical consultations and exams:</td>
</tr>
<tr>
<td></td>
<td>– As soon as possible following the incident or development of signs or symptoms.</td>
</tr>
<tr>
<td></td>
<td>– At additional times, if the physician determines follow-up is medically necessary.</td>
</tr>
</tbody>
</table>

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060. 05-03-093, § 296-824-40005, filed 1/18/05, effective 3/1/05; 02-20-034, § 296-824-40005, filed 9/24/02, effective 10/1/02.]

WAC 296-824-40010 Keep records.
You must:
• Keep a record of:
  – Name and Social Security number of the employee receiving medical surveillance
  – Physicians’ written opinions, recommended limitations, and results of examinations and tests
  – Any employee medical complaints regarding hazardous substance exposures
  – A copy of all information given to the examining physician (except a copy of this chapter)

Note: Keep records meeting the criteria specified in chapter 296-62 WAC, Part B, Access to records, for the length of time specified in that chapter.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-40010, filed 9/24/02, effective 10/1/02.]

WAC 296-824-500 Incident requirements. Summary.
Your responsibility:
To conduct and manage emergency response operations so employees are protected from hazardous substances and conditions.
You must:
Recognize emergencies and initiate a response
WAC 296-824-50005
Implement and maintain an incident command system (ICS)
WAC 296-824-50010
Prepare skilled support personnel
WAC 296-824-50015

Make sure the incident commander oversees activities during the response
WAC 296-824-50020
Use the buddy system in danger areas
WAC 296-824-50025
Provide rescue and medical assistance
WAC 296-824-50030.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-500, filed 9/24/02, effective 10/1/02.]

WAC 296-824-50005 Recognize emergencies and initiate a response.
You must:
• Make sure employees follow procedures in your emergency response plan to:
  – Recognize when an emergency response must be initiated
  – Notify employees, and others designated in your plan, of the release
  – Follow immediate emergency procedures
  – Prevent the incident from increasing in severity or to secure the operation.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-50005, filed 9/24/02, effective 10/1/02.]

WAC 296-824-50010 Implement and maintain an incident command system (ICS).
You must:
(1) Make sure a single individual, acting as the incident commander (IC), is in charge of the site-specific incident command system (ICS) and acts within their designated role and training level.

Note: The IC may delegate tasks to subordinates (within their training level).

(2) Make sure all employers' emergency responders and their communications are coordinated and controlled by the IC.

Note: The IC may delegate tasks to subordinates (within their training level).

(3) Make sure each employer at the scene has designated a representative to assist the IC.

(4) Establish security and control of the site as specified in your written emergency response plan.

WAC 296-824-50015 Prepare skilled support personnel.

Note: The duties of skilled support personnel are described in Table 1, Roles and Duties of Emergency Responders.

You must:

(1) Make sure that your skilled support personnel (including those employees who are not regularly employed by you) who could be exposed to on-scene hazards are given an initial briefing at the site before they participate in any emergency response. The initial briefing must include:
• What chemical hazards are involved
• What duties are to be performed
• Instruction in the wearing of appropriate personal protective equipment

Note: Skilled support personnel do not need to comply with the other training requirements of this chapter.

(2) Make sure the safety and health precautions given to your employees are also given to skilled support personnel.

WAC 296-824-50020 Make sure the incident commander oversees activities during the response.

The employer of the incident commander (IC) must:

(1) Identify all hazardous substances and conditions present, within their training level, using site analysis and maximum exposure limits, when appropriate.

(2) Implement emergency response procedures appropriate to the hazardous substances and conditions present, such as:
• Procedures that address the use of engineering controls, hazardous substance handling, and new technologies
• Procedures that address decontamination
• Procedures that address PPE

• Procedural that limit the number of personnel to those who are actively performing emergency response operations, in areas where exposure could exist.

(3) Designate an incident safety officer (ISO).

• Make sure the ISO demonstrates knowledge about operations being implemented at the emergency response site. They must:
  – Identify and evaluate hazards
  – Communicate with the IC about hazards, immediately informing the IC of corrective actions that must be taken when conditions are judged to be:
    ◆ An imminent danger
    OR
    ◆ Immediately dangerous to life or health (IDLH)
  – Provide direction about the safety of operations.

WAC 296-824-50025 Use the buddy system in danger areas.

You must:

• Make sure operations and tasks (including limited actions) in danger areas are conducted using the buddy system in teams of two or more.

Definition:
Danger areas are areas where conditions pose a serious danger to employees, such as areas where:
• Immediately dangerous to life or health (IDLH) conditions could exist.

OR
• High levels of exposure to toxic substances could exist.

OR
• There is a potential for exceeding the lower explosive limit (LEL), also known as the lower flammability limit (LFL), of a hazardous substance.

WAC 296-824-50030 Provide rescue and medical assistance.

You must:

(1) Provide stand-by employees equipped with the same level of personal protective equipment (PPE) as the entrants, for assistance or rescue.

Note: The buddy system applies to stand-by employees (see WAC 296-824-50025).

• One of the two stand-by employees can be assigned to another task provided it does not interfere with the performance of the stand-by role.
• Rescue equipment should be selected and provided based on the types of rescue situations that could occur.

You must:

(2) Make sure employees trained in first aid are readily available with necessary medical equipment and have a way to transport the injured.

Note: Employee training is covered by WAC 296-800-150, first aid. This rule requires training on the eighteen subjects listed in addition to any subjects that are specific to your workplace emergency hazards (for example: If exposure to corrosive substances could occur, training would need to include first-aid procedures for treating chemical burns).

• Employers who designate and train their employees to provide first aid are covered by chapter 296-823 WAC, Occupational exposure to bloodborne pathogens.
WAC 296-824-600 Personal protective equipment.  
Summary.
Your responsibility:  
To provide appropriate personal protective equipment (PPE) and make sure it is used properly.  
You must:  
Use appropriate personal protective equipment WAC 296-824-60005  
Control hazards created by PPE WAC 296-824-60010  
Use PPE properly WAC 296-824-60015.

WAC 296-824-60005 Personal protective equipment.  
Use appropriate personal protective equipment (PPE).  
Note:  • Only properly trained employees should select PPE. Hazardous materials technicians and hazardous materials specialists can select PPE within the competencies specified in Table 4.  

Table 9  
Selecting PPE for Specific Hazards  
<table>
<thead>
<tr>
<th>If:</th>
<th>Then:</th>
</tr>
</thead>
</table>
| • Inhalation hazards could be present. | • Positive-pressure (pressure-demand) self-contained breathing apparatus (SCBA)  
OR • A decreased level of respiratory protection only when the incident commander determines, from air monitoring results, that employees will be adequately protected. |

Chemical exposure levels will create a substantial possibility of:  
• Immediate death.  
• Immediate serious illness or injury.  
• Reduced ability to escape.  

Either positive-pressure (pressure-demand):  
• SCBA  
• Air-line respirators equipped with an escape air supply.  

Skin absorption of a hazardous substance may result in a substantial possibility of:  
• Immediate death.  
• Immediate serious illness or injury.  
• Reduced ability to escape.  

Protection equivalent to Level A including a totally encapsulating chemical protective (TECP) suit.  

WAC 296-824-60010 Control hazards created by personal protective equipment (PPE).  
You must:  
• Control hazards created by the use of PPE, including:  
  – Heat stress due to extremely high temperatures.  
  – Any other employee health hazard and consideration.  

WAC 296-824-60015 Use personal protective equipment (PPE) properly.  
You must:  
• Selection requirements in other PPE rules also apply, including:  
  – WAC 296-800-160, Personal protective equipment.  
  – Chapter 296-842 WAC, Respirators.  
  – WAC 296-24-58505, Fire brigades.  
  – Chapter 296-305 WAC, Safety standards for firefighting.  

You must:  
• Provide appropriate PPE at no cost to the employees and make sure it is used if hazards could be present.  
  – Select PPE (such as respirators, gloves, protective suits and other PPE) based on:  
    ♦ An evaluation of the performance characteristics (such as breakthrough time and hazardous substance-specificity of the material or item) relevant to the requirements and limitations of the site.  
    ♦ Task-specific conditions and durations.  
    ♦ The hazards and potential hazards of the site (see Table 9, Selecting PPE for Specific Hazards).  
  – Select totally encapsulating chemical protective (TECP) suits, as specified in Table 9, that:  
    ♦ Maintain positive air pressure.  
    ♦ Prevent inward test gas leakage of more than 0.5 percent.  

Note:  Follow the manufacturer's recommended procedure for testing a TECP suit's ability to maintain positive air pressure and prevent inward gas leakage. Other established test protocols for these suits, for example NFPA 1991 and ASTM F1052-97, may also be used.

(2/17/09)
(4) Make sure compressed air cylinders used with SCBAs meet the testing and service life requirements of the United States Department of Transportation (USDOT). Search at: [http://www.dot.gov](http://www.dot.gov).

Note: You can also check with the cylinder manufacturers to obtain USDOT test and service life specifications.

You must:
(5) Make sure PPE is maintained in a safe and reliable condition using your plan's procedures.

PPE maintenance includes:
- Decontamination
- Cleaning
- Inspection
- Identification of damage or defects
- Parts repair or replacement
- Storage or disposal.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-60015, filed 9/24/02, effective 10/1/02.]

**WAC 296-824-700 Postemergency response.**

Your responsibility:

To protect employees during postemergency response activities by following appropriate work practices, training and other requirements.

[Statutory Authority: RCW 49.17.010, [49.17].040, [49.17].050, and [49.17].060. 02-20-034, § 296-824-700, filed 9/24/02, effective 10/1/02.]

**WAC 296-824-70005 Follow the appropriate postemergency response requirements.**

Important:
- Postemergency response is the stage of the emergency response where the immediate threat from the release has been stabilized or eliminated, and cleanup of the site has started.
- When cleanup is done by the employees who were part of the initial emergency response, the employees are not covered by this section (however, training, PPE and other requirements in WAC 296-824-20005 through 296-824-60015 apply to these employees).

You must:
(1) Follow Table 10 to determine which requirements apply to your postemergency response activities.
(2) Maintain clean-up equipment as specified in Table 10.

### Table 10

**WAC 296-824-800 Definitions.** The following definitions are specific to this chapter:

**Annually**  
Any twelve-month cycle.

**Buddy system**  
A system of organizing employees (who enter or stand by danger areas) into work groups, so each employee can be observed by at least one other member of the group. The purpose of this system is to provide rapid assistance to employees in an emergency.

**Clean-up operation(s)**  
An operation where hazardous substances are removed, contained, incinerated, neutralized, stabilized, cleared up or, in any other manner, processed or handled with the goal of making the site safer for people or the environment.

**Danger area**  
Areas where conditions pose a serious danger to employees, such as areas where:  
- Immediately dangerous to life or health (IDLH) conditions could exist  
  OR  
- High levels of exposure to toxic substances could exist  
  OR  
- There is a potential for exceeding the lower explosive limit (LEL), also known as the lower flammability limit (LFL), of a substance.

**Decontamination**  
Removing hazardous substances from employees and their equipment so potential adverse health effects will not occur.

[Ch. 296-824 WAC—p. 12]
Emergency response
An organized response to an anticipated release of a hazardous substance that is, or could become an uncontrolled release.

Emergency response plan
A written plan that requires coordination between emergency response participants, and contains procedures, criteria, and other information that will be applied to emergency response operations. Each employer's plan should be compatible with local and state plans.

Engineering controls
Methods of controlling employee exposures by modifying the source or reducing the quantity of contaminants.

HAZMAT team (HAZMAT team)
A group of employees who are expected to perform responses to releases, or possible releases, of hazardous substances for the purpose of control and stabilization. As a result of their duties, HAZMAT team members may have close contact with hazardous substances.

Note: A HAZMAT team may be a separate component of a fire brigade or fire department.

Hazardous substance
Any of the following substances that could adversely affect an exposed employee's health or safety:

- Substances defined under section 101(14) of the Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA) or "Superfund" Act (visit: http://www.epa.gov)
- Biological or other disease-causing agents released that could reasonably be expected to cause death, disease, behavioral abnormalities, cancer, genetic mutation, physiological malfunctions (including malfunctions in reproduction) or physical deformations in a person or their offspring when the person:
  - Is directly exposed to the agent in the environment
  - Directly ingests, inhales, or assimilates the agent from the environment
  - Indirectly ingests the agent through a food chain
- Substances listed by the United States Department of Transportation as hazardous materials under Title 49 (Transportation) in the Code of Federal Regulations (C.F.R.), Part 172, section 101 and appendices (visit: http://www.nara.gov and search for "List of C.F.R. subjects")
- Hazardous wastes as defined in this chapter.

Hazardous waste
A substance designated by chapter 173-303 WAC, Dangerous waste regulations, department of ecology, as a dangerous waste or an extremely hazardous waste and any waste fitting the definition of "health hazard" in this chapter.

Health hazard
A chemical, a mixture of chemicals, or a pathogen for which there is statistically significant evidence, based on at least one study conducted according to established scientific principles, that acute or chronic health effects may occur in exposed employees.

The term "health hazard" includes stress due to temperature extremes and chemicals that are:

- Carcinogens
- Toxic or highly toxic agents
- Reproductive toxins, irritants, corrosives, sensitizers, hepatotoxins, nephrotoxins, or neurotoxins
- Agents acting on the hematopoietic system agents that damage lungs, skin, eyes, or mucous membranes. (Detailed definitions of these chemical terms can be found in the Safety and health core rules, WAC 296-800-170, chemical hazard communication.)

Incident command system (ICS)
An organized approach to control and manage operations at an emergency response incident.

Incidental release
A release that can be safely controlled at the time of the release and does not have the potential to become an uncontrolled release.

Note:

Example of a situation that results in an incidental release:
A tanker truck is receiving a load of hazardous liquid when a leak occurs. The driver knows the only hazard from the liquid is minor skin irritation. The employer has trained the driver on procedures and provided equipment to use for a release of this quantity. The driver puts on skin protection and stops the leak. A spill kit is used to contain, absorb, and pick up the spilled material for disposal.

Immediately dangerous to life or health (IDLH)
Any atmospheric condition that would:

- Cause an immediate threat to life
- Cause permanent or delayed adverse health effects
- Interfere with an employee's ability to escape

Limited action
Action necessary to:

- Secure an operation during emergency responses,

Must
Must means mandatory.

Permissible exposure limit (PEL)
Means the established time-weighted-average (TWA) concentration or ceiling concentration of a contaminant that must not be exceeded. The exposure, inhalation, or dermal...
permissible limit specified in chapter 296-841 WAC, airborne contaminants.

**Personal protective equipment (PPE)**
Protective items designed to be worn by the user to protect them against airborne, skin contact and other hazards.

This includes items such as respiratory protection, protective suits, gloves, eye protection, etc.

**Postemergency response**
The stage of the emergency response where the immediate threat from the release has been stabilized or eliminated, and cleanup of the site has started.

**Published exposure level**
Exposure limits published in "National Institute for Occupational Safety and Health (NIOSH) Recommendations for Occupational Safety and Health" (DHHS publication #92-100, 1992).

If an exposure limit is not published by NIOSH, then "published exposure level" means the exposure limits published by the American Conference of Governmental Industrial Hygienists (ACGIH) in "TLVs and BEIs-Threshold Limit Values for Chemical Substances and Physical Agents" (1999 edition).

**Note:** Additional exposure levels published by recognized organizations such as the American Industrial Hygiene Association are not required to be observed by this rule; however, they may be a useful resource when a hazardous substance is not covered by NIOSH and ACGIH publications.

**Release**
A spill, leak, or other type of hazardous substance discharge.

**Uncontrolled release**
A release where significant safety and health risks could be created. Releases of hazardous substances that are either incidental or could not create a safety or health hazard (i.e., fire, explosion or chemical exposure) are not considered to be uncontrolled releases.

Examples of conditions that could create a significant safety and health risk:

- Large-quantity releases
- Small releases that could be highly toxic
- Potentially contaminated individuals arriving at hospitals
- Airborne exposures that could exceed a WISHA permissible exposure limit or a published exposure limit and employees are not adequately trained or equipped to control the release.

Example of an uncontrolled release:
A forklift driver knocks over a container of a solvent-based liquid, releasing the contents onto the warehouse floor. The driver has been trained to recognize the vapor is flammable and moderately toxic when inhaled. The driver has not been trained or provided appropriate equipment to address this type of spill. In this situation, it is not safe for the driver to attempt a response. The driver needs to notify someone of the release so an emergency response can be initiated.

**Workplace**
- A fixed facility
- A temporary location (such as a traffic corridor)
- Locations where employees respond to emergencies.

**You**
The employer. For a complete definition of "employer" see Safety and health core rules, chapter 296-800 WAC.

[Statutory Authority: RCW 49.17.010, 49.17.040, 49.17.050, 49.17.060 07-05-062, § 296-824-800, filed 2/20/07, effective 4/1/07; 05-03-093, § 296-824-800, filed 1/18/05, effective 3/1/05; 02-20-034, § 296-824-800, filed 9/24/02, effective 10/1/02.]
