<b>Average</b>	<b>20.9</b>	<b>20.4</b>	<b>20.6</b>

Notes: Average calculated directly from the table.

In 2007 it appears I calculated the average as bills enacted as a percent of bills introduced This year (2010?) I changed that to bills passed over introduced.

Data: Vetoed07.dta, and then  $gen\ pct = 100 * pass / intro$

Version \*Passed09b.\* is sorted with most recent years at the top.
