

Preliminary Experience Study and Actuarial Valuation Results

Matt Smith, FCA, EA, MAAA,
State Actuary

Lisa Won, ASA, FCA, MAAA,
Senior Actuary

Office of the State Actuary
"Securing tomorrow's pensions today."

June 17, 2014

Today's Presentation

- Highlights from preliminary experience study and actuarial valuation report
- Budget impact of assumption changes and updated contribution rates
- Managing budget and rate impacts
- Decisions for July meeting

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

What Is An Experience Study?

- Review of current assumptions
 - How do they compare with actual experience?
 - Do they need to change?
- Assumptions help us estimate
 - When benefits are paid
 - How much is paid
 - How long they're paid

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Why Do We Perform Them?

- Things change
- Ensure assumptions remain reasonable
 - Reasonable assumptions contribute to reasonable funding
- Important part of systematic actuarial funding
- Risk management

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

How Do We Perform Them?

- They're data driven
 - Over 20 years of experience in some cases
- They also involve professional judgment
 - Past not always the best predictor of future
- Because they involve professional judgment and expertise
 - You hire an actuary to perform studies and certify work
 - You hire an outside actuary to review reasonableness

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Why Are The Results Preliminary?

- Concurrent actuarial audit in progress
- The results may change
- Final results available in July

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Summary Of Updates To Current Assumptions

- **Mortality**
 - Changes to reflect lower mortality rates since last study
 - Updates to projected increases in life spans
 - Increases short-term costs
 - Most significant assumption change in this experience study
- **Retirement**
 - Changes to reflect later retirement; except in WSPRS
 - Decreases short-term costs
- **Termination**
 - Changes to reflect fewer early career terminations; except TRS
 - Changes to reflect more late career terminations (20+ YOS)
 - Decreases short-term costs (due to TRS changes)

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Summary Of Updates To Current Assumptions *(Continued)*

- **Disability**
 - Minor adjustments made to most plans
- **Salary increases**
 - Changes to “service based” salary increase assumptions
 - Lowered early career increases and increased/extended salary scale
 - Increases short-term costs
- **Miscellaneous assumptions**
 - Increases short-term costs
- **Supporting data provided in Attachments A-G**

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

National Studies Show People Are Living Longer

- Life expectancy has increased about two years per decade since 1960

Year	Life Expectancy
1900	47.3
1920	54.1
1940	62.9
1960	69.7
1980	73.7
2000	76.8
2010	78.8

Life expectancy from birth. U.S. Census Bureau; all races, all genders.

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Factors Affecting Future Mortality Trends

- According to Office of the Chief Actuary (OCACT) for SSA, factors contributing to generally rapid overall rate of improvement during past century
- According to OCACT, each of these developments is expected to make a substantially smaller contribution to future improvement rates
- According to OCACT, future improvements will depend on

- Access to primary medical care
- Discovery of and general availability of antibiotics and immunizations
- Clean water supply and waste removal
- Rapid rate of growth in standard of living

- Medical technology and innovation
- Treatment and evolution of existing disease; emergence of new disease
- Changes in amount/type of physical activity; changes in nutrition
- Prevalence of obesity and cigarette smoking
- Other factors not summarized here

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Long-Term Rates Of Mortality Improvement

- According to the Society of Actuaries (SOA), long-term averages of U.S. population mortality improvement rates generally hovered around 1 percent
 - Between 1900 and 2009, the age-sex-adjusted death rate in U.S. declined at an average rate of 1.10 percent per year
 - From 1982 to 2009, the same death rate declined at an average rate of 0.92 percent per year
- In 2011, life expectancies recommended by an outside Technical Panel to SSA for their intermediate cost projections equate to a long-term improvement rate of 1.26 percent
- In 2013, the CBO assumed a long-term improvement rate of 1.17 percent in their Long-Term Budget Outlook report
- According to SOA, there's a long-standing pattern of lower mortality rates among retirement program participants compared to the general U.S. population

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

10

Mortality Projection Scales

- Several projection scales available from SOA
 - Scale AA
 - Scale BB
 - MP-2014 (proposed; not final)
- Represent rates of improvement (decreases) in future mortality rates
 - Separate rates by gender
- Vary by dimension/format of scale and experience data used to develop scale
 - 1D – age only
 - 2D – age and year of birth
- Current assumption is 50 percent of Scale AA

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

11

Development/History Of Current Assumption

- Not a new subject for Washington State
- Scale AA included in 2001-2006 Experience Study
 - Fifty percent of Scale AA proposed in 2008
 - Adopted rates for 2009-2011 excluded projected improvements in mortality
- Scale AA included in 2010 rate calculations for 2011-2013
 - Adopted rates for 2011-2013 included 50 percent of Scale AA
- Scale AA reviewed in 2007-2012 Experience Study
 - Rate calculations for 2015-2017 will include an updated assumption from the most recent data/analysis available

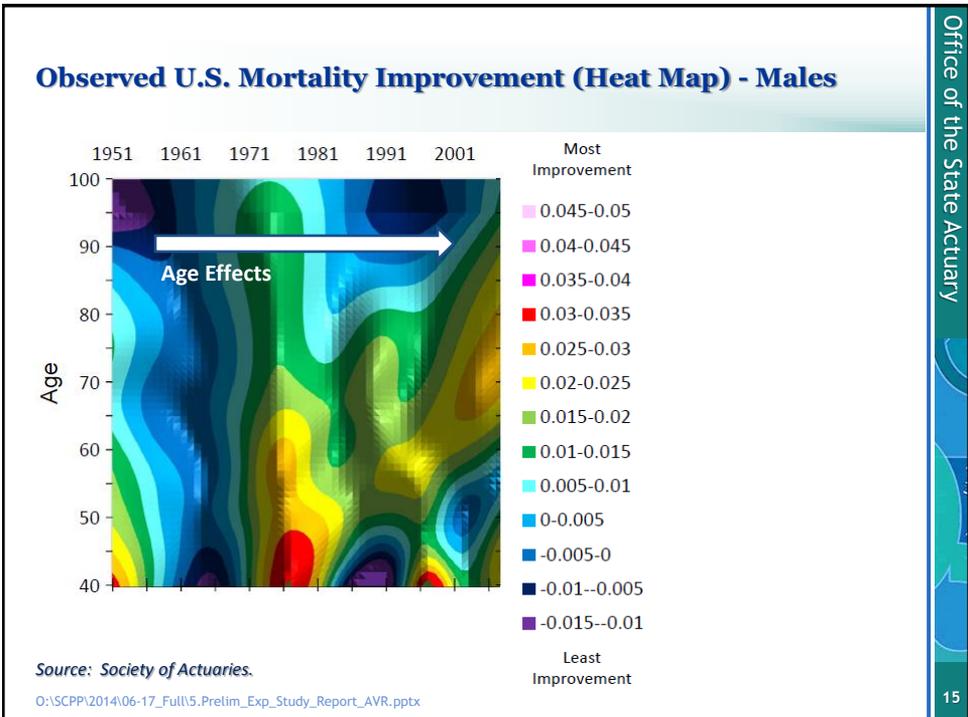

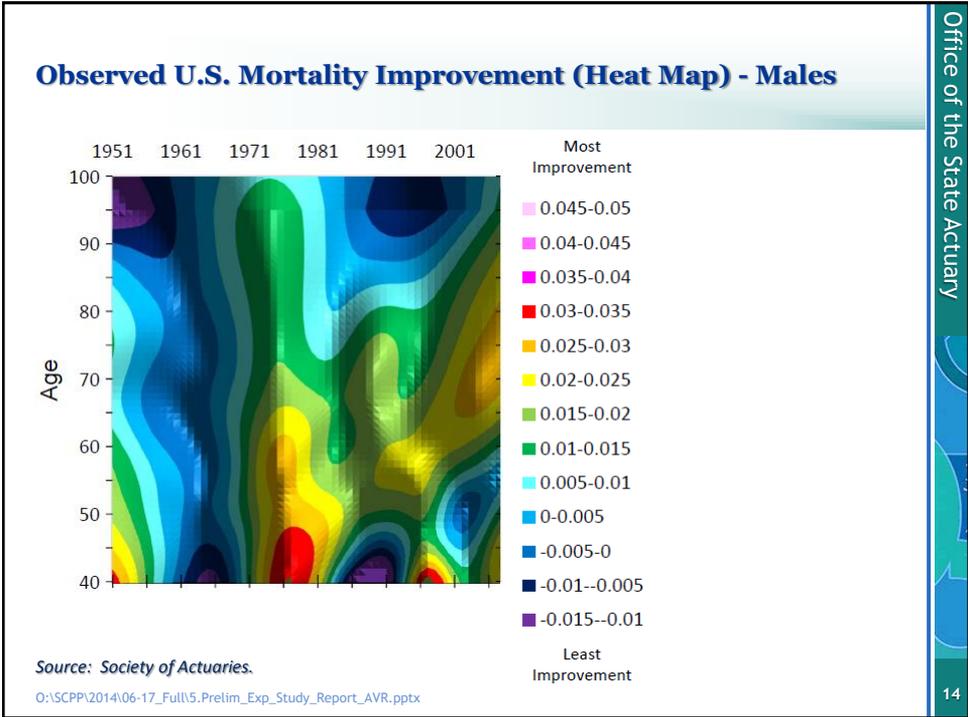

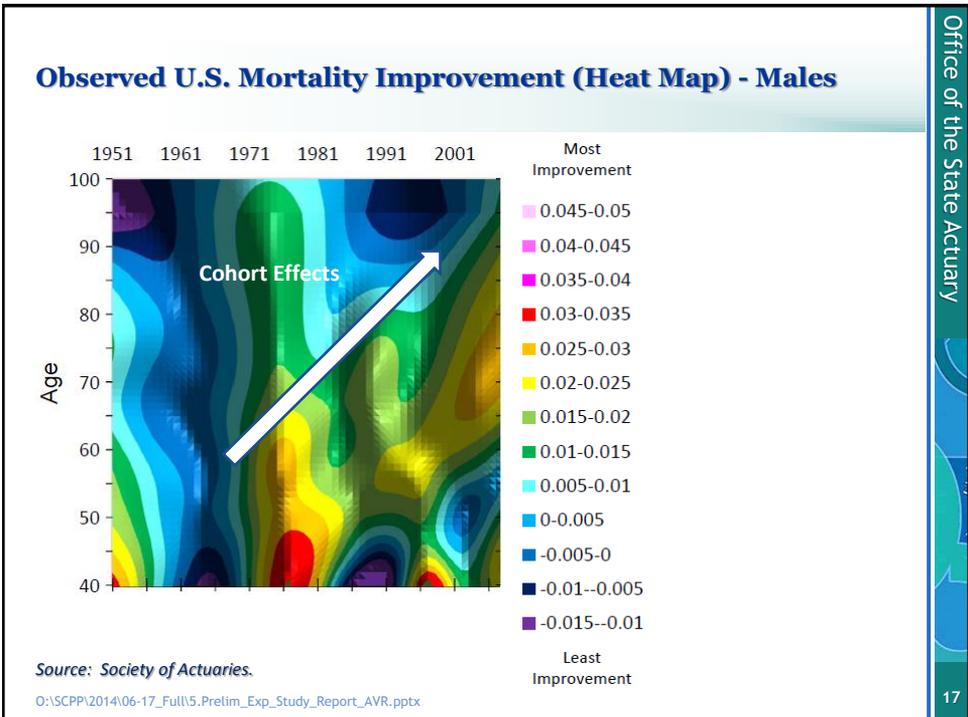

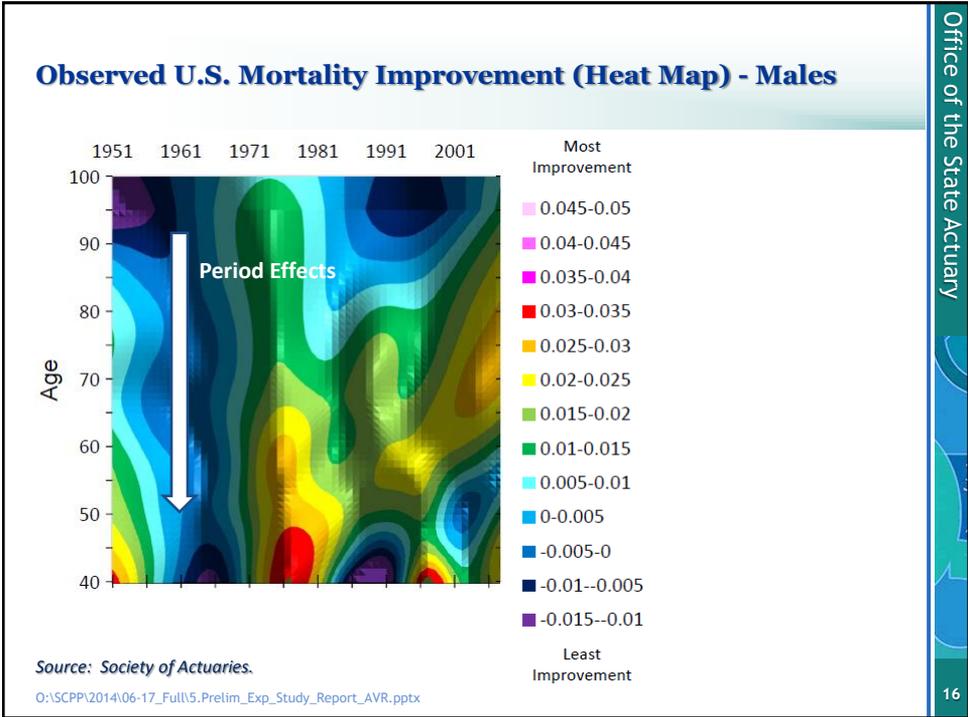

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Scale AA

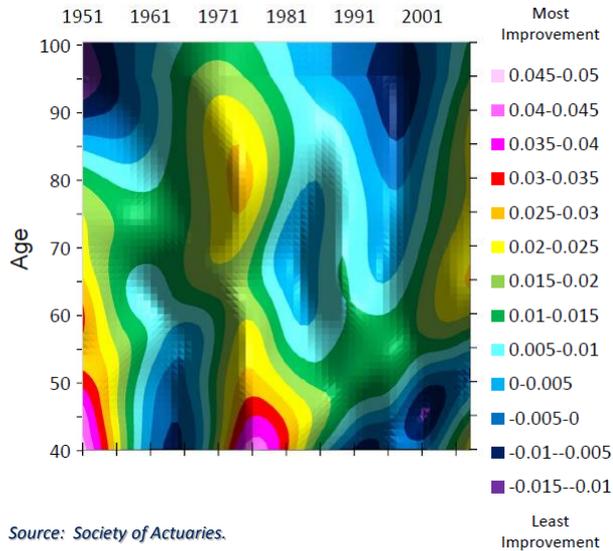

- First projection scale released by SOA in 1995
- Developed using SSA and Civil Service Retirement System data from 1977 to 1993
- Assumed rates of improvement
 - Minimum rate of improvement of 0.5 percent for ages under 85
 - Graded down to 0.1 percent at age 100
 - No improvement at ages over 100
- In late 2009, Retirement Plans Experience Committee (RPEC) of SOA found
 - *“... a noticeable degree of mismatch between the Scale AA rates and actual mortality experience for ages under 50, and the Scale AA rates were lower than actual mortality improvement rates for most ages over 55.”*
- Analysis also showed cohort effects
 - Improvements varying by generations

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

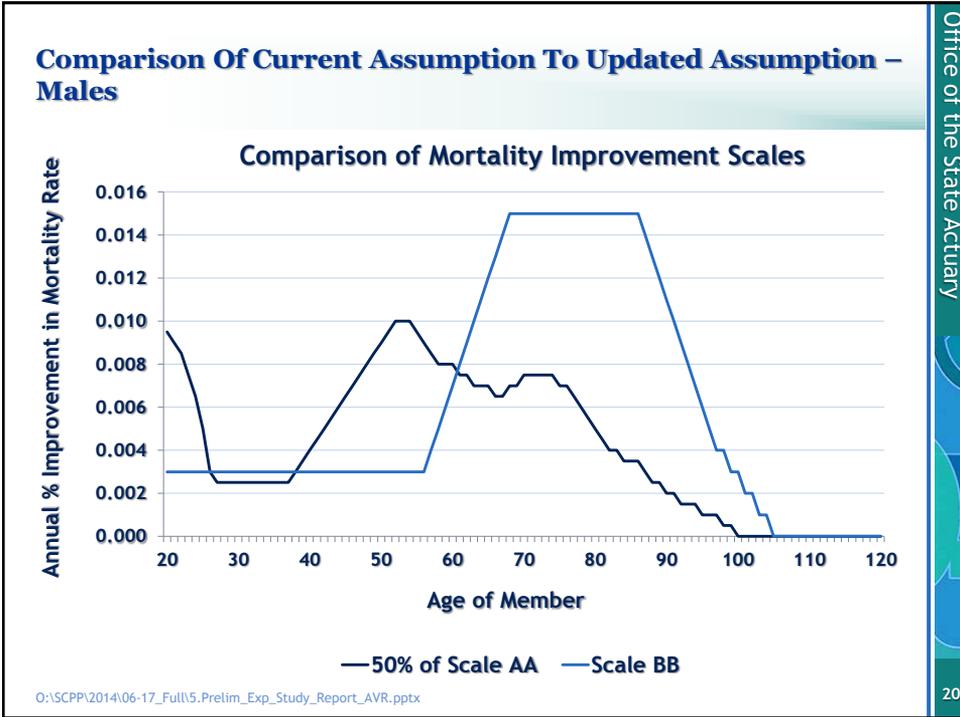

Observed U.S. Mortality Improvement (Heat Map) - Females

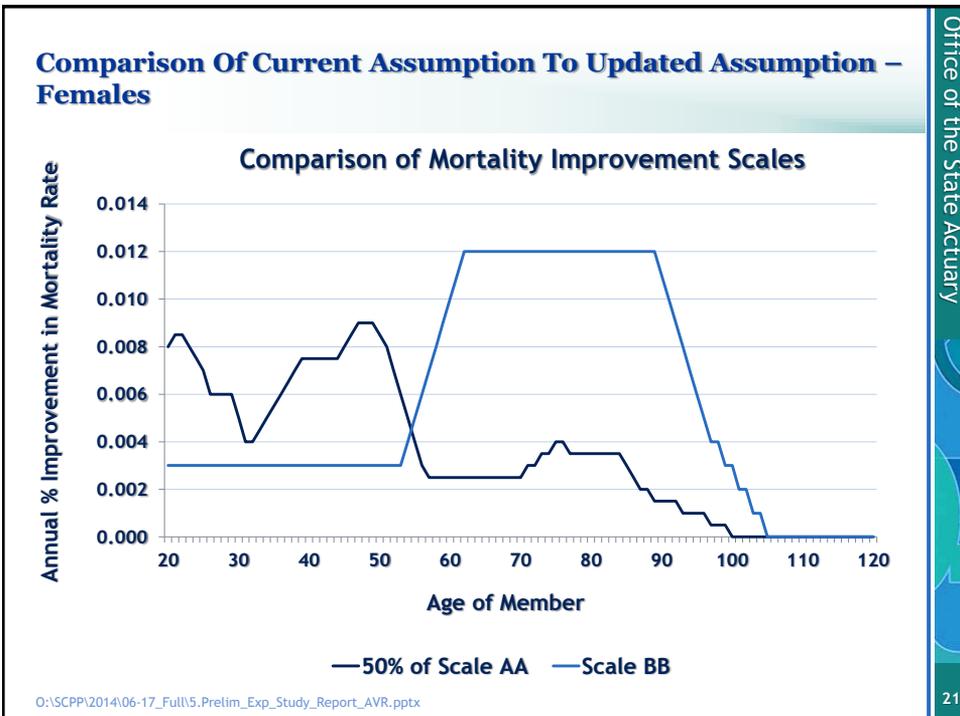

Scale BB

- Interim improvement scale released by SOA in 2012
- Created to replace Scale AA
- Prepare actuaries for upcoming 2D improvement scale
- Developed using SSA data from 1950 to 2007
- Assumed rates of improvement for 2D table
 - Long-term rate of 1 percent for all ages through 90
 - Decreasingly linearly from 90 to 120
 - Convergence periods of up to 20 years for age/period effects and ten years for cohort effects
- 2D table converted to an approximate 1D table
- Updated assumption from this experience study

Office of the State Actuary

Office of the State Actuary

How Much Mortality Improvement Do We See In Washington?

	% of Scale AA	% of Scale BB
1984-2012	109%	78%
1990-2012	152%	97%
1996-2012	204%	127%
2001-2012	143%	136%

For PERS, TRS, SERS, PSERS, LEOFF, and WSPRS combined.

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Comparison Of Life Expectancies – Age 65*

	50% of Scale AA (Current Assumption)	100% of Scale AA	100% of Scale BB (Updated Assumption)
In 2014			
Male	83.1	83.7	84.1
Female	85.4	85.7	86.4
In 2024			
Male	83.5	84.4	85.1
Female	85.6	86.1	87.3
In 2034			
Male	83.9	85.1	86.2
Female	85.8	86.6	88.2

*All based on RP-2000 combined mortality table with mortality projection to the year indicated above. No projection of mortality improvement beyond the year indicated above.

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Recap On Mortality

- Not a new subject for Washington State
 - Improvement assumptions reviewed during 2001-2006 Experience Study
- Current improvement assumption is 50 percent of Scale AA
- U.S. and Washington state data shows observed mortality improvement rates exceed current assumption
- Lower mortality rates among retirement program participants compared to the general U.S. population
- RPEC of SOA recommends, subject to materiality and the actuary's specific knowledge of covered group, use of Scale MP-2014 (when final) for all retirement programs in the U.S.
 - Additional information on Scale MP-2014 in Appendix
- Until MP-2014 becomes final, Scale BB represents the interim 1D table that approximates the 2D Scale MP-2014
- Updated assumption is Scale BB for this experience study

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Next Up

- Preliminary valuation results
 - June 30, 2013
 - Includes all updated demographic assumptions from experience study (ExpStudy)
 - Lower expected rate of investment return (ExpROR); 7.8 percent
- Budget impacts
 - Include results from latest actuarial valuation plus all updated assumptions

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Measuring Plan Health

- Has everything happened as planned?
- Are we on track with our systematic actuarial funding plan?
- Two key measurements
 - Funded status
 - Unfunded Actuarial Accrued Liability (UAAL)

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Funded Status

- Comparison of plan assets to today's value of earned pensions
 - Point-in-time measurement
- A funded status of at least 100 percent means a plan has at least \$1 in assets for each \$1 of earned pension liability
 - On track with systematic actuarial funding plan

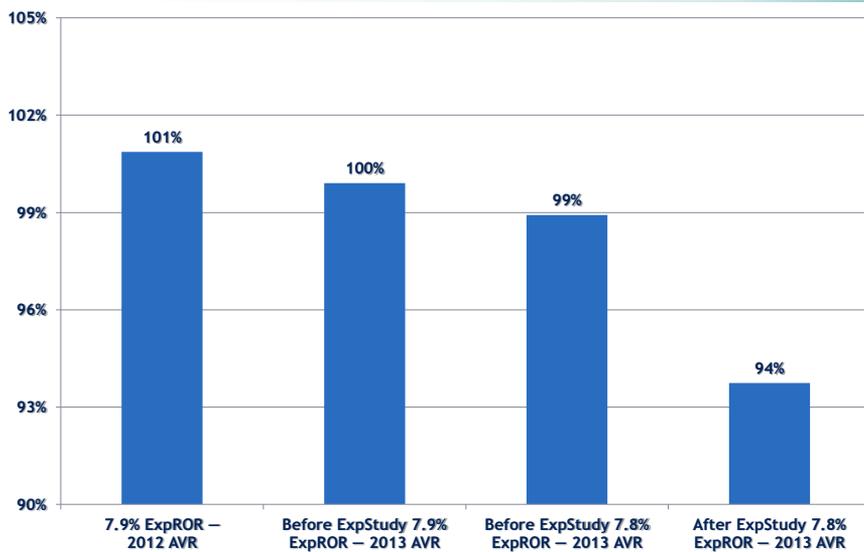

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Unfunded Actuarial Accrued Liability

- Occurs when a plan does not have sufficient assets to cover earned pension liabilities
 - Funded status less than 100 percent
- Off track with systematic actuarial funding plan
- Requires additional contributions to get back on track
 - Normal cost plus UAAL contributions

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Funded Status – All Plans Combined

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

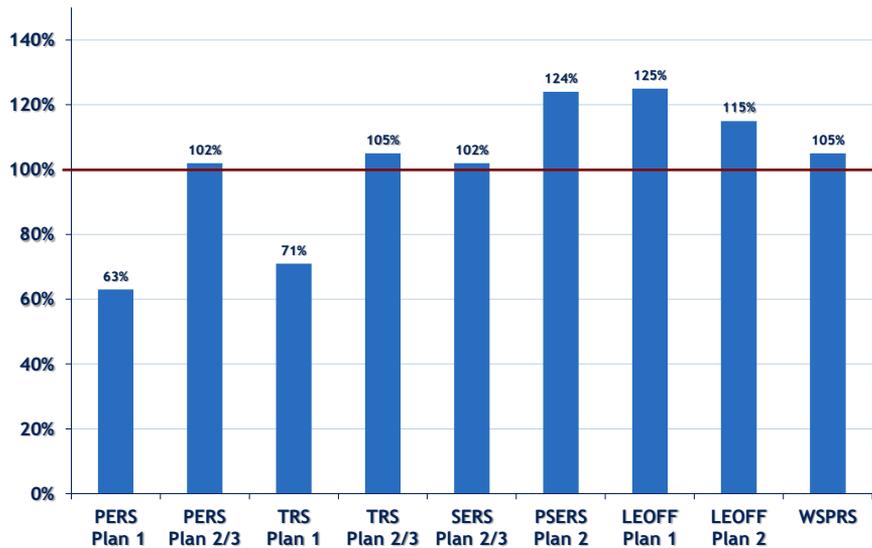

Funded Status – All Plans Combined (Continued)

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Plan For Getting PERS 1 And TRS 1 Back On Track

- New funding method adopted in 2009
- Requires higher employer UAAL contribution rates
- Phasing in higher UAAL rate requirements
 - Full requirements begin in 2015
- Expected full funding dates (before assumption changes)
 - 2027 in PERS 1; 2026 in TRS 1
 - Assumes required contributions are made and actuarial assumptions are realized
 - Full funding will occur sooner/later under optimistic/pessimistic outcomes

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Up Next: Preliminary Budget Impacts

- Concurrent outside audit in progress
 - Results may change
- 2015-17 and 2017-19 Budget impacts only
 - No long-term impacts provided
 - Excludes LEOFF 2
- Assumptions updated again in six years
- Actual costs based on actual benefits paid and actual investment returns on contributions made

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Preliminary 2015-17 And 2017-19 Budget Impacts

Increase in Budget*				
	Before ExpStudy 7.9% ExpROR	7.8% ExpROR Only	ExpStudy Changes Only	After ExpStudy 7.8% ExpROR
(Dollars in millions)	A	B	C	A+B+C
2015-2017

*WSPRS maximum employee rate is 7.19%

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Managing Budget And Rate Impacts

- PFC and Legislature may consider short-term funding policy changes to manage the short-term impacts of assumption changes
- Balancing act
 - Pay now or pay more later
 - Finding the sweet spot; affordable now and later
- Options to manage budget and rate impacts
 - Recognize full cost and rate increases from assumption changes now; or
 - Spread cost of assumption changes over more than one biennium

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Recent Phase-Ins

- 2005-09 rate increases (C 370, L 2005)
 - Phased in rates over four years
 - All expected costs contained over the phase-in period
- New Plan 1 funding method adopted in 2009 (C 591, L 2009)
 - Phased in higher minimum rates over six years
- Lower rate of return assumptions (C 7, L 2012)
 - 7.9 percent assumed ROR for 2013-15
 - 7.8 percent assumed ROR for 2015-17
 - 7.7 percent assumed ROR for 2017-19

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Decisions For The July Meeting

- Recommendation to Pension Funding Council
- Possible options
 - Adopt rates from 2013 AVR
 - Adopt rates with impacts of assumption changes phased-in
- SPCPP could recommend phase-in rates or defer to PFC and Legislature

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Appendix

■ Information on mortality improvement scale MP-2014

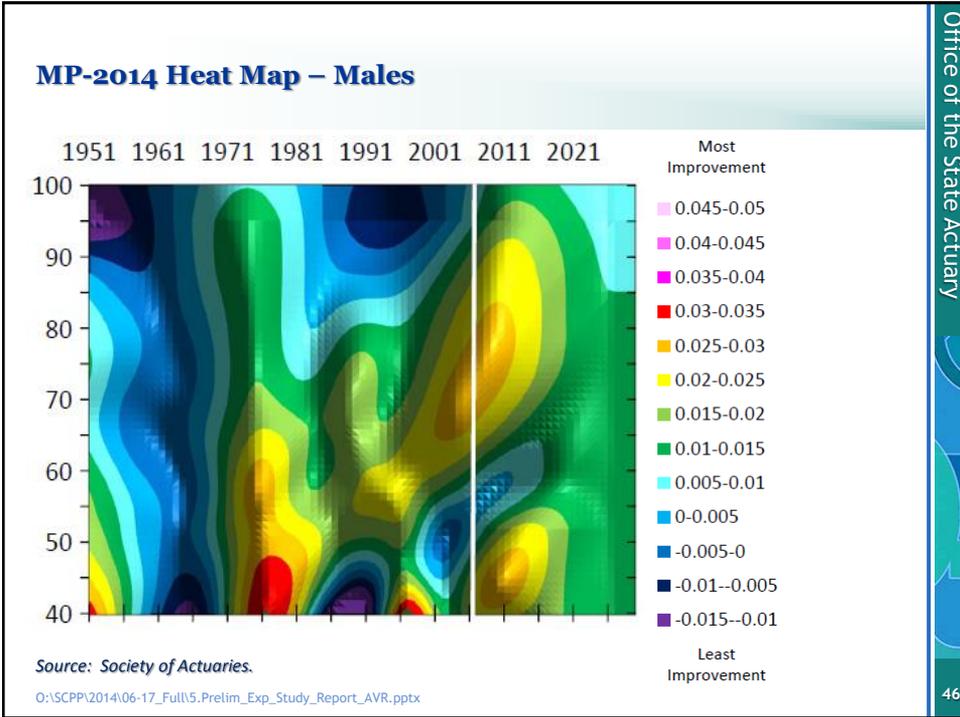

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx

Scale MP-2014

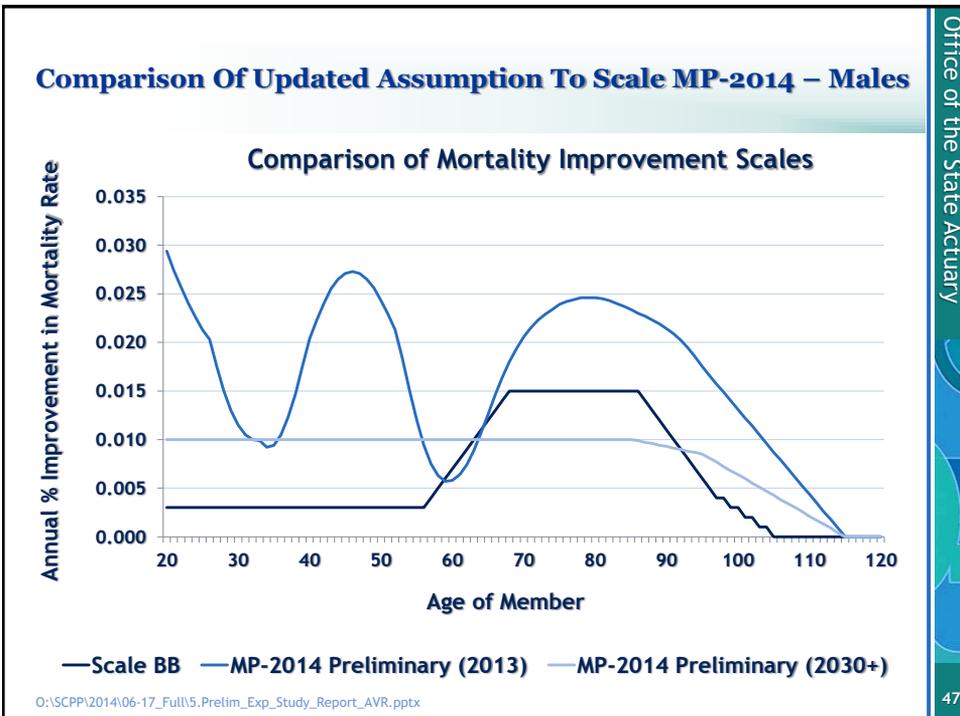

- Proposed 2D scale to replace Scale BB
 - Improvement rates by age and year of birth
- Not yet final; adoption expected later this year
- Theoretical framework patterned after the mortality projections used to develop Scale BB-2D
 - Short-term mortality improvement based on recent experience;
 - Long-term improvement rates based on expert opinion; and
 - Short-term improvement rates blend smoothly into long-term assumption rates over an appropriate transition period

O:\SCPP\2014\06-17_Full\5.Prelim_Exp_Study_Report_AVR.pptx
