*Improve the Equity of
State Equalization Aid & Local Levies*

**Problem is with Formulas for
Two Quantities**

- Local Effort Assistance
 - Levy Authorizations
- 

The Problem with State Equalization Aid

Deals with Taxpayer Equity

- Equal money for equal effort
- **State aid** is to ensure that districts with the **same property value** receive the **same revenue** for the **same tax effort**.

Problem with State Equalization Aid

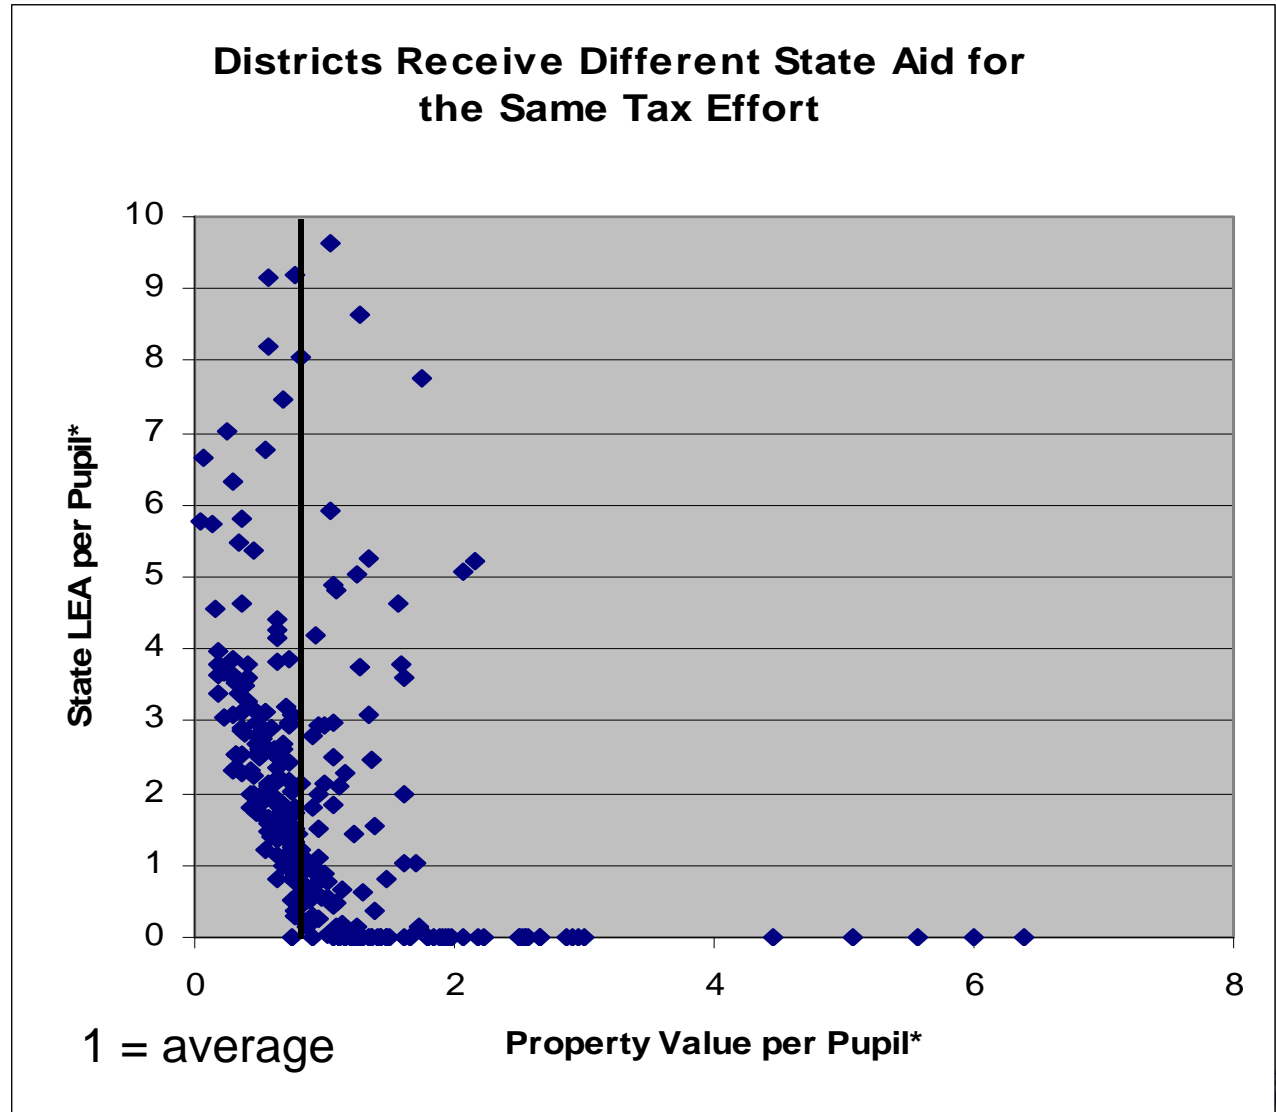

Local Effort Assistance (LEA) Varies Too Much

District	Property Value per Pupil* % Average	LEA per Pupil*
1 Tenino	77.3%	\$175
2 Kent	77.4%	47
3 Meridian	77.6%	189
4 Concrete	77.7%	291
5 Puyallup	78.1%	129
6 Lynden	78.2%	142
7 Adna	78.3%	225
8 Auburn	78.4%	59
9 Hockinson	78.4%	188
10 Woodland	79.7%	155
11 Cheney	80.1%	208
12 College Place	80.1%	67
13 Arlington	80.3%	100

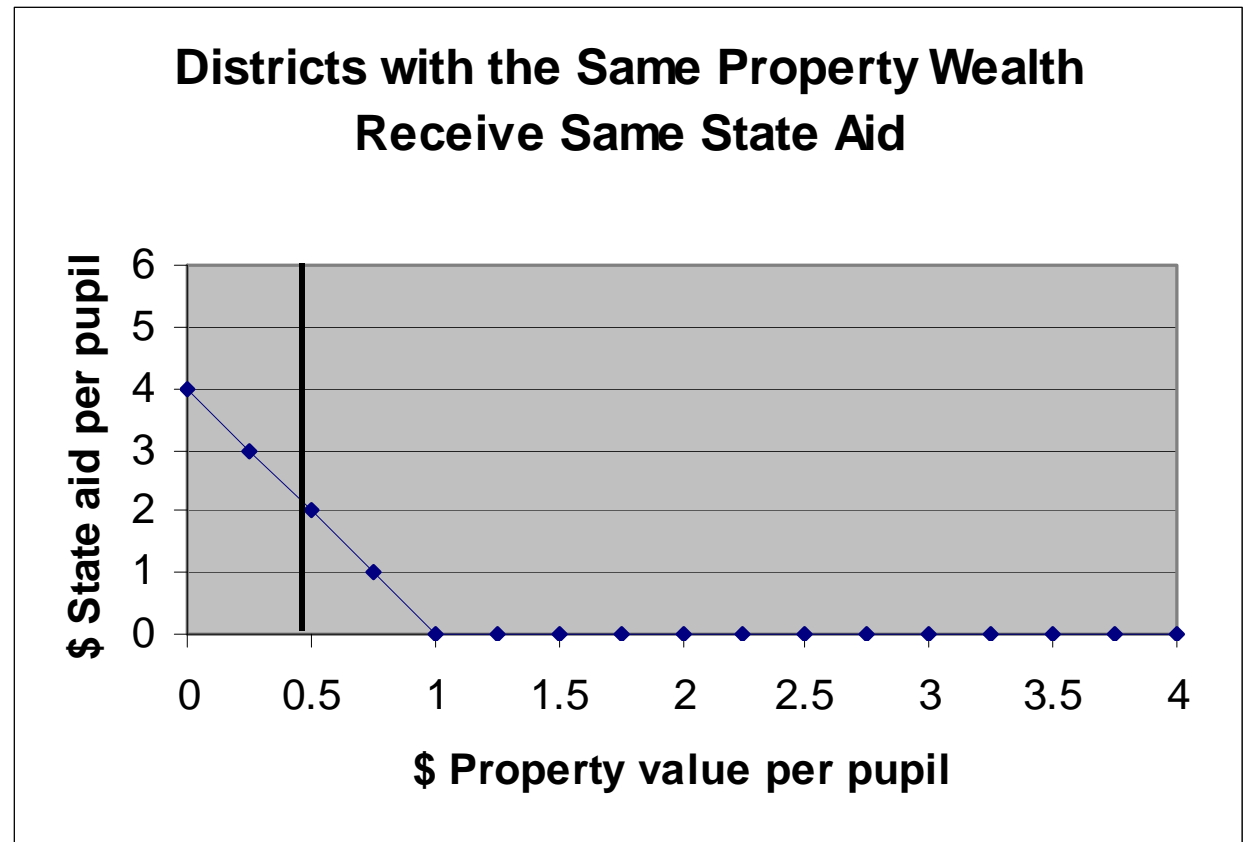

Problem with State Equalization Aid

The State Graph looks like this:

Improve the Equity of State Equalization Aid

State Graph Should Look Like This:

1 = average

Improve the Equity of State Equalization Aid

General formula for equalizing aid

$$\left(\frac{\$Foundation}{pupil} \right) - \left(Avg. tax rate * \frac{\$property}{pupil} \right) = \left(\frac{\$state}{pupil} \right)$$

constant amount

constant

x-variable

y-variable

Improve the Equity of State Equalization Aid

State formula for equalizing aid

$$\left(\frac{12\% \text{ of } \$Levy \text{ Authority}}{pupil} \right) - \left(Avg. \text{ tax rate} * \frac{\$Pr \text{ operty}}{pupil} \right) = \left(\frac{\$State}{pupil} \right)$$

varying amount

constant

x-variable

y-variable

Improve the Equity of Levies

Levy Authority formula has problems

Maximum Levy Authority =

$$24\% * \sum (\textit{state \& federal revenue streams})$$

The percentage
can vary from
24% to 33%

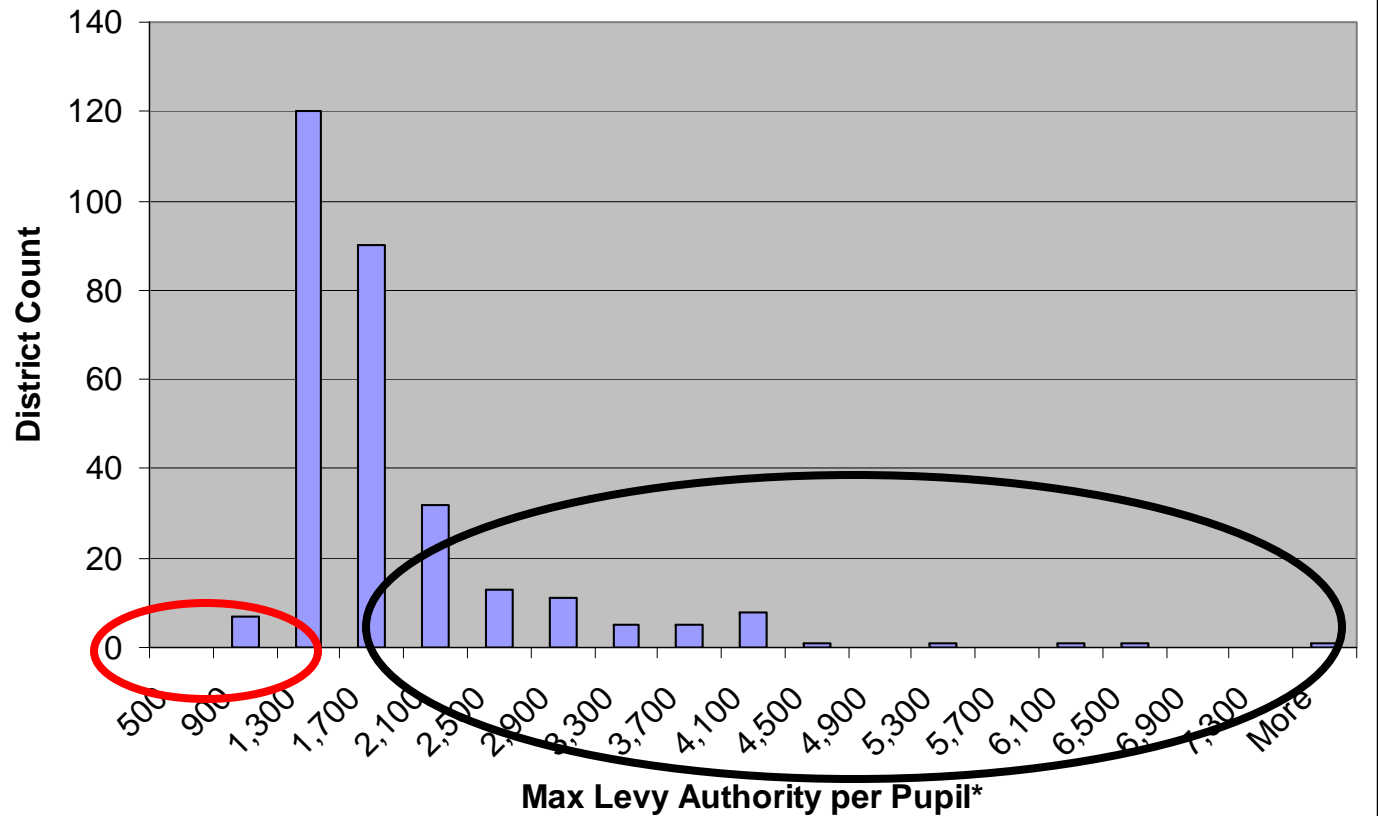

Revenue formulas
not fair.

Improve the Equity of Levies

Disparities in Maximum Levy Authorities per Pupil*

Improve the Equity of State Equalization Aid & Local Levies

- Local Effort Assistance

Suggest state equalize the same amount* per pupil for every district.

- Levy Authorizations

Set levy authorizations as a fixed percentage of the state's average funding per pupil*

Universal Formula for Grants

$$\text{FoundA} - (\text{Avg. tax rate} * \text{PropV}) = \text{State Aid}$$

Can be used to model different financing schemes (Tiered Models)

Financing Basic Education Amount,

- State funds only
- Mixture of State and Local funds

Spending Above the Basic Education Amount

- Any state equalization?
- Any limits on spending above basic education amount?
- Any provisions to protect low-income taxpayers?

Universal Formula for Grants

$$\text{FoundA} - (\text{Avg. tax rate} * \text{PropV}) = \text{State Aid}$$

- Helps predict effects on
- Student equity
 - Taxpayer equity

- Helps predict whether districts will spend grants on
- Providing taxpayer relief (supplant)
 - Education
 - Improving test scores (state & local values)
 - Other educational outcomes (locals value)
